## Letter of support

I am Mohamed Chetouani, Full Professor at Sorbonne University (formerly Pierre and Marie Curie). Since January 2024 I'm Deputy director of the Institute for Intelligent Systems and Robotics (ISIR CNRS UMR7222).

I am writing to provide my strong recommendation for Ali AHMADI, who is currently a research engineer in my research team. Ali graduated from the University of Padova and took courses from the Master Mathematics, Vision, Learning (MVA) for ENS Paris-Saclay, where he has successfully followed courses in machine learning, robotics, software engineering, control and applied mathematics, achieving excellent academic results. Throughout his studies, he has actively participated in multiple projects and internships, demonstrating strong technical ability and research potential.

Since December 2025, Ali AHMADI has been working as a research engineer in a the national PEPR O2R AS3 project « Décision, Apprentissage, Interaction Sociale ». His work focuses on machine learning for social navigation, which is a research domain at the interface of human-robot interaction, navigation, planning and machine learning. He successfully leverages recent works of the team on Vision-Language Models for human-robot interaction (mainly dialog and manipulation), and their adaptation to social navigation.

Ali is currently working on the integration of such models for a robotic demonstration. Ali is fully engaged in collaborations with the team and project members. Ali is planning to demonstrate his work in a large real study conducted in the PEPR O2R AS3 project.

In summary, Ali has demonstrated excellent technical skills, autonomy, and a strong ability to grasp complex theoretical concepts. I have no doubt that he will succeed in any future academic or professional endeavor he chooses to pursue.

Yours sincerely,
Mohamed Chetouani
